

PRACTISS Serotonin Syndrome Scenario Supporting Roles

| Role | Description (Role, Behaviour, Key Moments, Script) |
|------------------|---|
| Boyfriend | <p>You brought the patient to the ER. You will provide collateral history for the patient, as she will be agitated and not very cooperative.</p> <p>History: This morning, you found your girlfriend seeming confused and warm. She has a history of opioid abuse and is currently on methadone. What's more, she's also been on an antidepressant for some time now. This past weekend she was well, though you two did "party a lot and get pretty wasted last night".</p> <ul style="list-style-type: none">• If probed by learners, you will admit to cocaine use by you and your girlfriend, but you swear she hasn't done any prescription pain meds lately and has been taking her medication as prescribed. |
